searchlist
select
refresh
selectedhost

Constructor & Destructor Documentation

◆ __init__()

```
def Search.Search.__init__ (    self,

                                parent,

                                client,

                                name,

                                serveraddr,

                                args,

                                kwargs

                             )
```

Member Function Documentation

◆ insertobox()

```
def Search.Search.insertobox (    self,

                                  data

                               )
```

Method to add things to box, such as found games.

Parameters

      self the object pointer

◆ onselect()

```
def Search.Search.onselect (    self,

                                evt

                             )
```

responds to selection of game

Parameters

      self the object pointer

      evt the event from the Listbox

◆ refreshgames()

def Search.Search.refreshgames (self   )

Finds and displays games.

Parameters

> **self** the object pointer

◆ selectgame()

def Search.Search.selectgame (self   )

client/server stuff happens here

Parameters

> **self** the object pointer

Member Data Documentation

◆ addresses

Search.Search.addresses

◆ client

Search.Search.client

◆ games

Search.Search.games

◆ hosts

Search.Search.hosts

◆ index

Search.Search.index

◆ maincontainer

Search.Search.maincontainer

◆ myparent

Search.Search.myparent

◆ name

Search.Search.name

◆ refresh

Search.Search.refresh

◆ searchlist

Search.Search.searchlist

◆ select

Search.Search.select

◆ selected

Search.Search.selected

◆ selectedhost

Search.Search.selectedhost

◆ serveraddr

Search.Search.serveraddr

◆ titlelabel

Search.Search.titlelabel
